DETAILED ACTION

Response to Amendment

1. This communication is in response to the amendment of 9/27/2005. Accordingly, Claims 1-9 are currently pending in the application.

Response to Arguments

2. Applicant's arguments, see page 5-9, filed 09/27/2005, with respect to claims 1-9 have been fully considered and are persuasive. The rejection of claims 1-9 has been withdrawn.

Allowable Subject Matter

3. Claims 1-9 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

4. Claim 1 is allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose sending a node state advertisement identifying the first router, and a link about which the first router desires to receive link state information and at each of at least one second router determined to lie along the path, maintaining an association between the link and the first router, the association indicating that link state advertisements concerning the link are to be forwarded along the path toward the first router, and upon change of the state of the link, forwarding a corresponding link state

advertisement along the path toward the first router. It is noted that the closest prior art, Fedyk et al. (US 6560654) discloses a method of forwarding a first message from a source to a destination via a link state routing network utilizing point-to-point feedback messages when the quality of a first path from the source to the destination meets some prescribed condition. However, Fedyk et al. fails to disclose or render obvious to the above underline limitations as claimed.

5. Claim 7 is allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose **broadcasting a node state advertisement identifying the ingress node, and a link included in the primary communication path and at each of the routers determined to lie along the desired signaling path, maintaining an association between the link and the ingress node, the association indicating that link state advertisements concerning the link are to be forwarded toward the ingress node, and upon change of the state of the link, forwarding a corresponding link state advertisement toward the ingress node.** It is noted that the closest prior art, Fedyk et al. (US 6560654) discloses a method of forwarding a first message from a source to a destination via a link state routing network utilizing point-to-point feedback messages when the quality of a first path from the source to the destination meets some prescribed condition. However, Fedyk et al. fails to disclose or render obvious to the above underline limitations as claimed.
